

WONDERWALL®

PRODUCTS • LTD

Welcome to our information booklet

Firewall® is one of our best selling ranges of noticeboards and the purpose of this download is to show you the full range of options currently available from Wonderwall in a logical sequence.

Recent events have caused many organisations both in the public and private sectors to evaluate their current noticeboards and in many cases, if only for peace of mind, change them for fire retardant versions.

All versions of our Firewall® brand use materials that have been tested to the correct EU specification and if required relevant fire certification can be provided.

At the heart of Firewall® is the self-coloured fire retardant pinnable board made from largely recycled material and available in 11 stock colours. Uncovered i.e. framed or unframed, it does have certain acoustic qualities up to NRC 0.8, to help noise reduction. There are a wider range of colours available for house or corporate requirements but these would be on an extended delivery. We're happy to discuss this option.

Many ranges offer a wood effect aluminium framed version which is unique to Wonderwall and its associated manufacturer. We use a special printing process (not a wrap) to produce the light oak wood grain effect. This is also utilised in our Weatherproof outdoor showcases.

Colours Available

Our Firewall® tamperproof noticeboards are available in a number of versions:

- Standard aluminium frame
- Premier aluminium frame
- White premier aluminium frame
- Wood effect premier aluminium frame

We offer single door versions which can be mounted portrait or landscape and double door versions for landscape mounting. Unlike our corridor versions support stays for hinge top mounting are not included.

The glazing on standard aluminium versions is 2mm PET and on all 3 premier versions 3mm.

2 locks with matching keys are fitted to all versions.

The Firewall® pinboard material is recycled, and self-coloured to the 11 colours shown below.

Both the PET glazing and Firewall® pin board material are classified as B according to BS EN 13501-1, See yellow panel.

Also our Firewall® products meet guidelines set out in the BB100 document for safeguarding against fire in schools.

Suitable for use in any public buildings.

European reaction to fire test

Firewall® noticeboard construction has been tested and classified to European 'reaction to fire' test standard BS EN 13501-1 and classified as B. It is suitable for use within sensitive public areas such as corridors, stairways and entrances.

This identifies that these products can be used in the same areas as products tested to BS476 Parts 6 & 7 and classified 0.

It is generally accepted that top hinged tamperproof noticeboards are safer in corridors than side hinged as a side mounted door left unlocked is more likely to cause an obstruction in the event of an emergency exit than a top mounted one.

We offer our corridor tamperproof boards in standard aluminium frame, premier aluminium frame, white frame and wood effect frame, all with the same fire-retardant Firewall® pin board core; available in 11 colour options. See the yellow panel for more details on fire rating.
